FAST AND RELIABLE SHIPPING

Consistent, reliable and fast shipping and no surprises or excuses.

SIMPLY THE BEST

Biodynamic, non-GMO, and organic - sometimes less is more.

ALWAYS THERE TO HELP

Customer service just a text message or phone call away, 6 days a week, 18 hours per day.

HIPP2184

HiPP Hypoallergenic (HA) Stage 2 Combiotic Formula (600g) - Germany

Age: From 6 Months Onward

Yield: Approximately 15l fl oz of Formula

This is the new April 2023 formulation, now produced without added starch. HiPP Hypoallergenic (HA) Stage 2 Combiotic is suitable from 6 months onwards and is designed to meet the needs of children who are at risk of allergies. Milk protein can be a decisive factor in triggering allergies in humans. The HiPP Hypoallergenic product line is based on extensively hydrolyzing the (cow) milk protein, which makes the protein molecules smaller, simpler and easier for baby to process. Stated differently, the hydrolyzed milk protein is less foreign to the human body than the natural cow milk protein.

HiPP has a strong foundation built on scientific research and provides everything necessary for a baby's development, such as Vitamins A, C, and D. Vitamin D is essential for calcium absorption and bone growth and Omegas 3 (ALA), naturally found in breast milk, is a long chain polyunsaturated fatty acid (LCP) that help with brain and eye development.

- ✓ Hypoallergenic; only extensively hydrolyzed milk protein
- ✓ Probiotics based on strains found in human breast milk
- ✓ Vitamins A, C, D for baby's immune system
- ✓ Omegas 3 & 6 for brain and central nervous system development
- ✓ Prebiotics (GOS) for gut health and softer stool

- ✓ No corn-based sweeteners
- ✓ No maltodextrin
- ✓ No starch
- ✓ No GMOs
- ✓ Now with Metafolin

INSTRUCTIONS

Preparation for all powdered formulas (also consistent with US FDA guidelines):

1. Boil water freshly for each of baby's meals and allow to cool down to 120 degrees Fahrenheit (50 °C) before mixing with formula powder.
2. Pour in ½ of the necessary amount of boiled water into a clean and sterilized bottle.
3. Using the scoop provided with your box of formula (note that spoon sizes vary by brand and even lot), add the correct number of leveled scoops of powder (1 leveled scoop of powder per 1oz / 30ml of water).
4. Close the bottle with the nipple and cap and vigorously shake.
5. Add the remaining half of the water to the bottle and shake again.
6. Cool to drinking temperature (approximately 98 degrees Fahrenheit or ~ 37 °C) and ALWAYS test the temperature of the milk before feeding to avoid scalding or burning your little one.

There are many mothers that regularly use distilled water without boiling it, apparently with no negative consequences. We cannot recommend this approach and there are actual reasons even the US FDA recommends pre-boiling tap or distilled water instead.
